BLOCKCHAIN-ENHANCED FEEDBACK MANAGEMENT SYSTEM FOR EDUCATIONAL INSTITUTIONS

2024 2nd International Conference on Computer, Communication and Control (IC4)

CONTENT OF THE PAPER

- Blockchain Application: It proposes a system that uses Ethereum's smart contracts to create a decentralized network for student feedback submission. The feedback is encrypted and stored as an immutable hash on the blockchain, ensuring data integrity and eliminating intermediary validation.
- System Advantages: The paper highlights the benefits of this system, such as improved data integrity, transparency, and direct feedback analytics for educational authorities. It also draws lessons from real-world applications like the Crime and Criminal Tracking Network and Systems (CCTNS).
- Challenges and Future Work: While acknowledging the potential of blockchain in education, the paper also discusses obstacles like security risks, scalability issues, and high implementation costs. It suggests further research and pilot implementations to refine the system.

UNDERSTANDING FROM THE PAPER

Blockchain-Driven Feedback Management System designed for educational institutions. Here are some key takeaways:

- Decentralized System: Utilizes Ethereum's smart contracts to create a secure, decentralized network for student feedback submission.
- Data Integrity: Feedback data is encrypted and stored as an immutable hash on the blockchain, ensuring records cannot be tampered with.
- Direct Analytics: Provides direct feedback analytics to educational authorities, eliminating intermediary validation and promoting transparency.
- Real-world Applications: Draws lessons from systems like the Crime and Criminal Tracking Network and Systems (CCTNS) to establish a robust feedback ecosystem.

PROBLEM STATEMENT DERIVED FROM THE PAPER

Educational institutions often struggle with managing student feedback effectively.

- Centralization and Intermediaries:
  - Traditional feedback systems involve intermediaries (e.g., faculty, administrators) who collect and validate feedback.
  - This centralized approach can lead to delays, lack of transparency, and potential biases.
- Data Manipulation and Integrity:
  - Feedback data can be altered or lost due to manual handling or centralized databases.
  - Ensuring the integrity and security of feedback records is crucial.
- Trust and Transparency:
  - Students and faculty need a system they can trust.
  - Transparency in feedback collection, storage, and analysis is vital.

THANK YOU
